Postal Address?  
 This is usually called **Mailing Address**. Is there any reason why "Postal" was used?

'US Address' option is default. International option takes user to SUC-7 My Login Profile – International screen.

Change current button to 'Continue' rather than 'Submit'. Continue takes user to confirmation screen.

Password and Secret Answer fields need to be masked.

Why should these be masked? The user is verifying these. What if the user fat fingered something. People have a habit of copying and pasting the confirmation field.

This message should only display if the email address was updated.

Shouldn't we say something that regards the law? "Please be aware that the Government requires us to use your old email address for 30 days before this new email address becomes your permanent in our system."

This message should only display if the postal address was updated.

This button will be the traditional 'Back' button for POC.

This cancel button does not meet current guidelines. Should be like nano cancel button
